30.	Berk Uğuroğlu	Software Engineer	Full Time	Havelsan	Ankara,Turkey	linkedin.com/in/berkuguroglu	

*Candidates were randomly ranked in terms of suitability for the position.

The features that will distinguish each candidate for a full stack software engineer position are their experience and the programming languages they know. Nearly half of the listed candidates are proficient in many programming languages and have experience in this field. Many are currently working as fullstack software engineers. The listed candidates' work experience, which may be suitable for the position, varies between 0 and 5 years. In addition, whether the candidates are currently employed or not is also indicated in the table. Students who have no experience as a full time, did internships and part-time works suitable for the position. As a result, all listed candidates can be considered for the position.

Note: Minel Aydın, in my opinion, is the greatest candidate for the job. She has grown not just professionally, but also socially. She is fluent in five languages and she has worked on 14 projects. In addition to several programming languages, she has sector knowledge in areas such as project planning, project management, and business strategy, which will benefit her in the workplace.
